Neoen to host community information sessions on Kentbruck Green Power Hub

- The proposed 900MW wind farm and battery storage facility will be the largest, and one of the first energy projects in Australia to be located within an actively managed and harvested pine forest
- Project will bring an estimated \$1B investment to Australia's renewable energy future and economy

Neoen (ISIN Code: FR0011675362, ticker: NEOEN), one of the fastest-growing leading independent producers of exclusively renewable energy worldwide, will be hosting two public information sessions on its proposed Kentbruck Green Power Hub on the 15th and 16th April, 2019. The proposed 900MW wind farm and battery storage facility is the first of its kind in Australia, with turbine construction occurring within an actively managed and harvested pine forest.

Located mainly in pine plantation owned by Mount Gambier plantation company GTFP, Kentbruck Green Power Hub will span 30km in the far-west of Victoria, between the towns of Portland and Nelson. The public drop-in sessions follow initial consultations with neighbours and the local council and serve to inform the community on the assessment process and to receive feedback on the project.

Franck Woitiez, Managing Director of Neoen Australia said, "While we are still in the early stages of the project, Neoen's policy is to maintain an open and consistent dialogue with local councils, communities and neighbours from the very beginning. The community information sessions with the people of Portland and Nelson will allow us to share more details on our proposed development and address any potential concerns early on."

"At Neoen, all our projects aim to protect, retain and restore natural resources and the environment. As part of our environment impact studies for the Kentbruck project, we will enlist independent experts and consultants to carry out detailed ecological assessments to ensure the proposed development does not threaten or destroy surrounding fauna during and after construction," Woitiez added.

GTFP's Managing Director, Laurie Hein said, "GTFP is pleased to be working with Neoen on its proposed project at Kentbruck. We believe it will benefit the local community and provide clean, renewable energy on a national scale. We have been impressed with Neoen's thorough approach to planning for this project, providing GTFP with confidence the project will properly address any concerns that we and other community stakeholders may have."

Neoen has a proven track record in successfully developing and operating large-scale renewable energy projects in Australia, including the world's largest lithium-ion battery in Hornsdale, South Australia, and the country's largest fully operational photovoltaic facility in Coleambally, New South Wales. The company abides by all planning guidelines and only selects land identified by local and state authorities as suitable for renewable energy developments.

In addition to delivering sustainable, reliable and competitive electricity to Australians, its 11 projects currently in operation or under construction across the country have also benefitted regional communities through local economic stimulation and jobs creation.

Public drop-in sessions will provide the local community with details of the project and an opportunity to raise any questions around the proposed development.

Community drop in session details:

Event: Nelson Community Drop-In Session
Date: Monday, April 15
Time: 2pm – 7pm
Venue: CFA Hall

Event: Portland Community Drop-In Session
Date: Tuesday, April 16
Time: 2pm – 7pm
Venue: Portland Library

About Neoen

Founded in 2008, Neoen is France's leading and one of the world's most dynamic independent producers (IPP) of renewable energy. With a current capacity of more than 2 GW already in operation or under construction, and a further 1 GW of projects formally awarded and secured, Neoen has doubled its size in over just 24 months. Neoen is active in France, Australia, El Salvador, Zambia, Jamaica, Portugal, Mexico, Mozambique, Finland and Argentina and has assets in more than 15 countries. It operates Europe's most powerful solar PV farm (300 MW in Cestas, France) and the world's largest lithium-ion power reserve in Hornsdale, Australia (100 MW/129 MWh storage capacity). At the end of 2017, Neoen won one of the largest (375 MW) and the most competitive solar project in Mexico. Neoen is targeting 5 GW capacity in operation and under construction by 2021. Neoen (ISIN Code: FR0011675362, ticker: NEOEN) is listed since October 2018 on the Compartment A of the regulated market of Euronext Paris.
